

# ENVIRONMENTAL POLICY

The environmental policy summarizes OilQuick's perspective on the concept of quality. The policy is central to achieving parts of our vision - to offer our customers a premium product in fully automatic quick coupler systems and to strive to be the best workplace in the universe.

Our driving force is to work towards a circular business model. This means that our value proposition must be kind to both the climate and people, while protecting our environment.

We will work to continuously improve our environmental performance and prevent pollution to achieve environmentally sustainable operations. We will comply with laws and other requirements placed upon us and be a role model in environmental work by reducing our business's negative environmental impact.

This requires continuous improvement efforts by the entire OilQuick team. The team includes both employees and stakeholders in the form of suppliers and customers.

- We shall, whenever the opportunity arises, seize the chance to influence customers and stakeholders to consider the environment.
- We shall plan and coordinate our transportation and personal travel.
- We shall advocate for electric/hybrid vehicles within the company.
